

EMS System

Minimum Required Drug List for **BLS (Non-Emergency)**

FORMULARY:

Quantity	Description
1	Glucose, oral tube

PEARL:

*EMT may administer Nitroglycerin to patients already prescribed medication.

**EMT may administer Epinephrine IM only.

***EMT may administer diphenhydramine by oral route only.

****EMT may administer Albuterol if patient already prescribed

*****EMT may administer Naloxone by intra-nasal (IN) route only.

Epinephrine in EMT systems may be used in Anaphylaxis only.

Agency medical director does not require contact of Medical Control prior to administration of the bulleted medications. Medications may be administered from EMS supply.

NOTE: Substitutions for medications as listed may become necessary due to lack of medication availability. These substitutions should match medication type and total dose wherever possible. Substitutions require prior authorization by the Office of the Medical Director.

This replaces any previously published list.
